

Invicta Bluetooth Application

Monitor the status of your battery from your phone

The Bluetooth (BT) range of Invicta batteries allows the user to conveniently monitor the status of the battery via a free application which is available on Apple and Android devices. This can be especially useful if the battery is placed in a hard to reach spot such as a battery box or behind a seat.

Through the Invicta Bluetooth app users can easily view the volts, remaining capacity, current draw and status of the Battery Management System (BMS). This is much easier and more accurate than testing through conventional means and removes the need to install expensive external equipment.

Easily Monitor

- Battery Capacity
- Battery Voltage
- Battery Current (Amps)
- Battery State of Charge (SOC)
- Battery State of Health (SOH)
- Battery Status
- Battery Temperature
- Battery BMS Alarms
